

**ENGINEERING H192  
PRELIMINARY ASSIGNMENT 08**

Complete the corrected SWITCH/CASE code under ANSWER:

**ANSWER**

<p>The following program needs to be corrected ( some basic items may be missing or incorrect ) so that the switch/case, based on the char variable shape, operates to give a single line of correct output if a 'C' or 'c', or an 'S' or 's' is provided and an error message otherwise. In the answer section, write the complete program segment.</p>	
<pre>// Segment Start switch(shape); {   case ( C )   case ( c )     printf("\nYou have indicated a CIRCLE\n");    case ( S )   case ( s )     printf("\nYou have indicated a SQUARE\n");    printf( " \n*** USER INPUT ERROR ***\n " ); } // Segment End</pre>	<pre>// Segment Start  // Segment End</pre>
